Humanoid Robot Firm Robros Wins Innovation Award at NextRise 2026

Yong Bi Yang | Time 2026.06.22 11:24 | Update 2026.06.22 11:26 | Reply 0

  

(Seoul=Yonhap Infomax) Yong Bi Yang - Robros, a humanoid robot specialist that has attracted substantial venture capital investment, announced on the 22nd that it won the "Next Innovator Prize" at the global startup event "NextRise 2026."

NextRise is South Korea's largest global startup and open innovation event, co-hosted by Korea Development Bank and the Korea International Trade Association. The Next Innovator Prize is awarded to the top 10 companies selected from hundreds of participating startups based on technological innovation and growth potential. Robros is the only robotics company among the winners.

Robros is expanding its demonstration scope across various industrial sites including manufacturing, logistics, and semiconductors by applying imitation learning-based autonomous task technology and reinforcement learning-based bipedal locomotion and whole-body control technology to its self-developed humanoid IGRIS-C.

Recently, the company has been selected for the most projects in the humanoid demonstration program promoted by the Korea Institute for Robot Industry Advancement, expanding its presence in South Korea's humanoid market by simultaneously pursuing technology development and commercialization.

"This award is a meaningful achievement that externally recognizes Robros' AI humanoid technology and commercialization capabilities," said Seung-jun Noh, CEO of Robros. "We will continue to develop humanoid platforms that provide practical value in industrial sites and grow into a company leading the global market."

Robros has benefited from venture capital support during its growth phase. Stick Ventures, HB Investment, and Lotte Ventures have invested in and supported the company's growth.
